

# Y10 Maths Knowledge Organiser Foundation Tier: Curved Shapes and Pyramids

What must I be able to do?	Key vocabulary
<b>New content:</b> <ul style="list-style-type: none"> <li>□ Calculate the length of an arc ➤ Sparx U221</li> <li>□ Calculate the area and angle of a sector ➤ Sparx U373</li> <li>□ Calculate the volume of a pyramid ➤ Sparx U484</li> <li>□ Calculate the volume and surface area of a cone ➤ Sparx U116, U523</li> <li>□ Calculate the volume and surface area of a sphere ➤ Sparx U617, U893</li> </ul>	<b>Sector</b> A fraction of a circle, cut from the centre like a slice of pizza. The two straight sides will be the radius of the circle.
	<b>Arc</b> A section of the circumference of a circle.

Pyramids

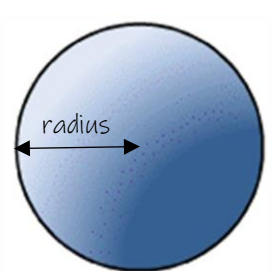

Volume =  $\frac{1}{3} \times \text{area of base} \times \text{perpendicular height}$

Surface area = area of base + area of all the triangles

Given to you in an exam!

Spheres

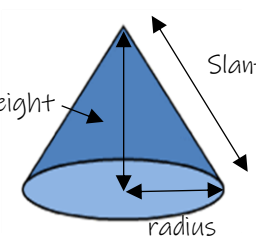

Volume =  $\frac{4}{3} \times \pi \times \text{radius cubed}$   
=  $\frac{4}{3} \pi r^3$

Surface area =  $4 \times \pi \times \text{radius squared}$   
=  $4\pi r^2$

Given to you in an exam!

Cones

Volume =  $\frac{1}{3} \times \pi \times \text{radius squared} \times \text{height}$   
=  $\frac{1}{3} \pi r^2 h$

Curved surface area =  $\pi \times \text{radius} \times \text{slant height}$   
=  $\pi r l$

Total surface area =  $\pi r^2 + \pi r l$

Given to you in an exam!

## Arcs and sectors

Area of a sector = fraction of a full circle x area of a circle

$$= \frac{\theta}{360} \pi r^2$$

Arc length = fraction of a full circle x circumference

$$= \frac{\theta}{360} \pi d$$

Perimeter of a sector = arc length + radius + radius

$$= \frac{\theta}{360} \pi d + 2r$$
