| What must I be able to do? | Key vocabulary |  |
| :---: | :---: | :---: |
| Represent fractions using are a diagrams, bar models and number lines <br> $\square$ Recognise and name equivalent fractions use equivalent fractions <br> > Sparxm410,M671 compare and order numbers involving fractions <br> > SparxM335 Express one quantity as a fraction of another Find a fraction of a set of objects or quantity <br> $>$ Sparx M158, m695,m684 Find the whole given a fraction Multiply a whole number or fraction by a whole number or fraction <br> $>$ SparxM157 Divide a whole number or proper fraction by a whole number or proper fraction <br> $\rightarrow$ Sparx M110 <br> $\square$ Add and subtract fractions with like and unlike denominators <br> > Sparx $M 835$ | Fraction | A fraction is a part of a whole. It is also a ratio between two numbers separated by a vinculum (_). It is represented by the division of one number by another. |
|  | Numerator | The 'top' part of a fraction - it tells us how many parts we are dealing with. |
|  | Denominator | The 'bottom' part of a fraction - it tells us how many parts the whole is divided into. |
|  | Equivalent | Equivalent fractions represent the same value. |
|  | Reciprocal | The reciprocal of a number is 1 divided by the number. |
|  | Unit fraction | A fraction where the numerator is 1 and denominator is a positive integer. |

## Equivalent fractions

Found by multiplying or dividing the numerator and denominator by the same value
e.g.

$\times 2 \xrightarrow[\times 4]{~-~}$

## compare/Order fractions

You need to first of all rewrite all fractions with equivalent fractions that all have the same denominator. Then you can compare/order the numerators.
e.g. $\frac{5}{8}$ vs $\frac{7}{11} \rightarrow \frac{5}{8}=\frac{55}{88}$ and $\frac{7}{11}=\frac{56}{88}$ $55<56$ so $\frac{5}{8}<\frac{7}{11} \quad \begin{aligned} & \text { The lowest multiple } \\ & \text { of } 8 \text { and } 11 \text { is } 88\end{aligned}$

## Reciprocals

Reciprocal of an integer is $\frac{1}{\text { integer }}$ e.g $5 \leftrightarrow \frac{1}{5}$
Reciprocal of a fraction "flips" it e.g. $\frac{3}{5} \longleftrightarrow \frac{5}{3}$

- Dividing by any number is the same as multiplying by its reciprocal.
- Multiplying by any number is the same as dividing by its reciprocal.

## Dividing by a fraction

Instead of dividing by a fraction, multiply by its reciprocal
e.g. $\frac{4}{9} \div \frac{4}{5}=\frac{4}{9} \times \frac{5}{4}=\frac{4 \times 5}{9 \times 4}=\frac{20}{36}=\frac{5}{9}$

Simplify your final answer if possible

## Adding and subtracting fractions

When the denominators are the same you just add or subtract the numerators
e.g. $\frac{3}{7}+\frac{2}{7}=\frac{5}{7}$
and $\frac{7}{9}-\frac{3}{9}=\frac{4}{9}$
Smallest common

Multiplying two fractions
Just multiply numerators and multiply denominators
e.g. $\frac{3}{7} \times \frac{2}{5}=\frac{3 \times 2}{7 \times 5}=\frac{6}{35}$

If the denominators are different we use equivalent fractions to write them with the same denominator first. Then add or subtract as normal.

$$
5
$$

## Fraction of a quantity

To find a fraction of a number (an integer multiplied by a fraction), divide the number by the denominator and multiply by the numerator
e.g. $45 \times \frac{3}{5}=45 \div 5 \times 3=9 \times 3=27$

$$
\left.\begin{array}{l}
\text { e.9. } \\
\times 5\left(\frac{1}{3}+\frac{3}{5}\right. \\
5
\end{array}\right) \times 3+\begin{array}{|} 
\\
\hline
\end{array}+
$$ multiple of $3=\frac{14}{15}$

$+$
